

Automated ID CONCEPT.

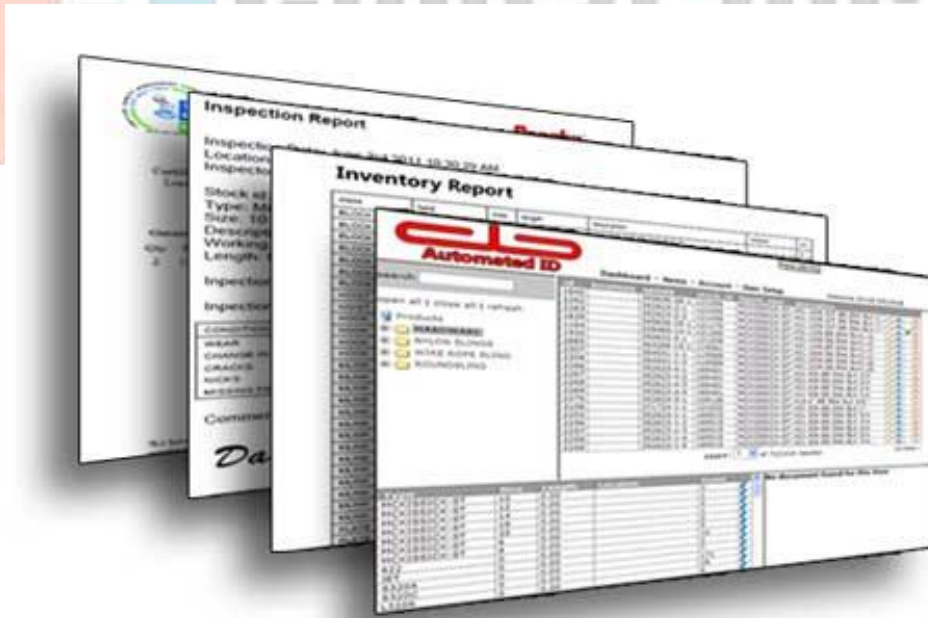

It was created by programmers from the lifting industry who understand the needs, requirements and challenges of not only keeping track of products (items) but also of providing our customers with the proper product related documents.

Certification documents cannot wait to be presented when a lift is about to take place.

Automated ID is created to minimize user input.

We believe that it is our job to provide the software with:

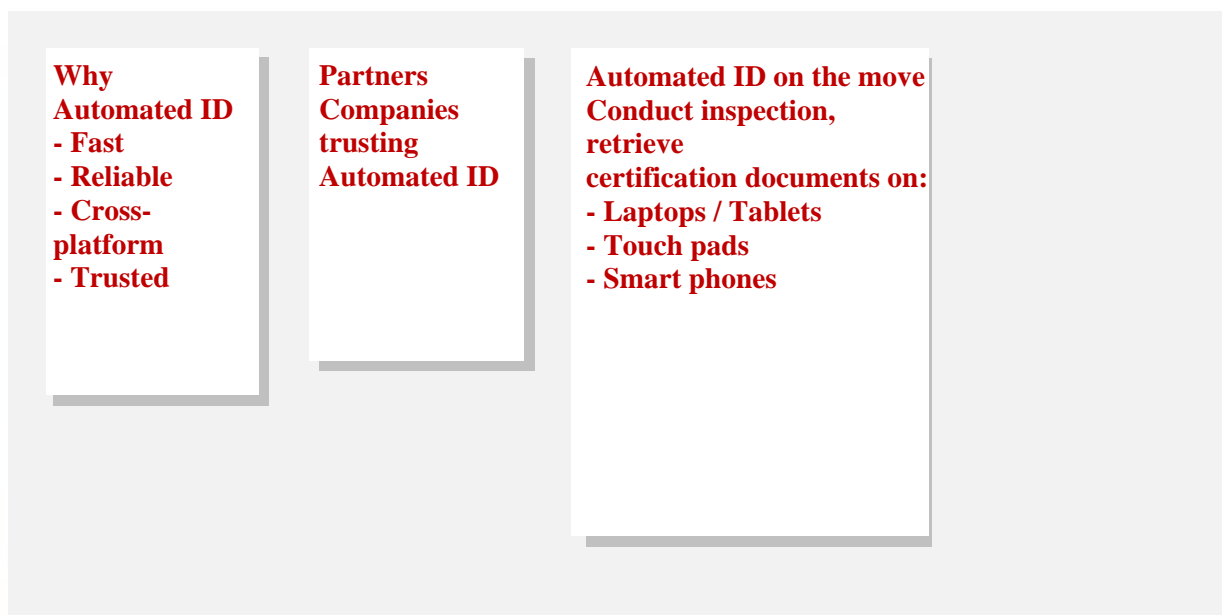

- Product description, size, working load limit, etc. ...
- Certificate of test
- Certificate of conformance
- Inspection Report
- Inventory Report
- Any other related documents you might require

The AI software package provides the following features and solutions:

- AI is available through two access methods - web and mobile
- AI web is an online program accessed through a browser
- AIC is the AI mobile software system running on a lightweight tablet
- Together, the AI programs provide access to your information in both office and non-office environments
- AI helps to streamline your processes while ensuring data accuracy

The access to this information is simple, fast and reliable.
