

## Globe Valve Series

Globe valves are our main products, with wide range of size, pressure rating and materials selection to be chosen from. Two kinds of casting are used, lost wax investment casting for low pressure small sizes, and sand casting for higher pressure and larger sizes

Globe Valve is forced closed valve, so valve is closed, the disc must put pressure to force the sealing surface does not leak. When the medium from the bottom valve into the valve, the operating force required to overcome resistance, the stem and the packing of the friction and pressure generated by the media, the thrust force off the valve to open the valve than the force, Therefore, the diameter of the stem to a large, otherwise the top curved stem failure occurred. In recent years, the emergence of self-sealing valve, globe valve to change the media flow to the top of the valve into the valve chamber, when under pressure in the medium and close the valve of the force is small, and open the valve of the force, stem diameter can be reduced accordingly.

We supplies: Cast steel Globe valve, Forged steel Gate Valve, Flanged end Globe Valve, Pressure Seal Globe Valve, Bellow seal Globe Valve...etc

Main material of the products are A105,LF2, WCB, C5,WC6, WC9,LCB, LCC,CF8(304), CF8M(316), CF3M(316L), CF3(304L) etc
