

SAFETY

Automated ID project phases to proactively look for trends and systematically prevent circumstances that allow incidents to happen.

When it comes to safety, valid dates are crucial to any safety devices

Fire extinguishers.

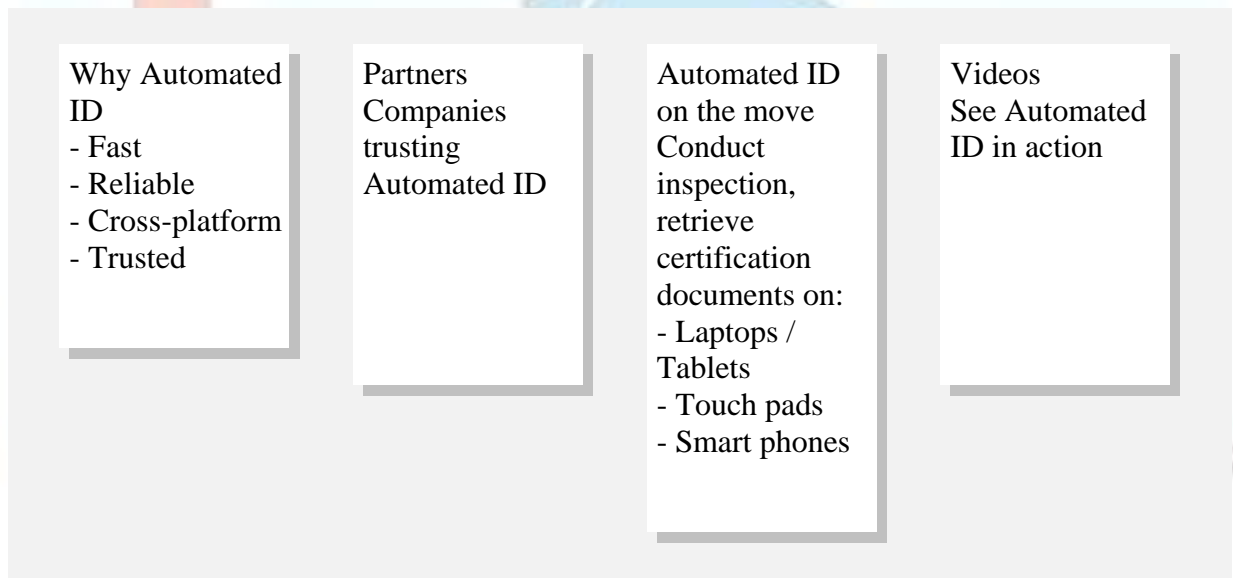

In the United States, fire extinguishers, in all buildings other than houses, are generally required to be serviced and inspected by a Fire Protection service company at least annually. Some jurisdictions require more frequent service for fire extinguishers. The servicer places a tag on the extinguisher to indicate the type of service performed and when.

Automated External Defibrillator

The survival rate of Sudden Cardiac Arrest (SCA) victims is greatly increased with the use of an Automated External Defibrillator (AED). Use of the AED will not replace the care provided by emergency medical services (EMS) providers, but is meant to provide a lifesaving bridge during the first few critical minutes it takes for advanced life support providers to arrive.

Having your Automated External Defibrillator inspected and knowing they are in good condition can save a life.

Automated ID will display a warning when the date on your equipment is about to expire
